

AFM300S

High Speed Envelope Sealer

A desk top envelope sealer in a compact package

The AFM300S is part of the All For Mailers Inc. range of mailing machines and is suitable for any size business!

Fast and Efficient

High speed sealing of water gummed envelopes up to C4 "wallet" style

Mixed Thickness Feed

No need to presort mail for "like" thickness.

Variable Speed Control

Allows speed adjustment depending on type of envelopes to give optimum sealing and feeding quality.

High Quality Rugged Construction

Designed for long life, high volume operation. Very few replacement parts ensure trouble free maintenance.

Optional 6 Digit Counter

Gives a total count of material fed since last reset.

Designed for the Application

Other sealers are usually designed as the "front end" of a postage meter and converted to "sealer", which often limits their comparative speed and particularly their robustness.

Count Only

The sealing arm can be adjusted to "count only" to create, for example, a total of incoming mail.

Staff Health and Safety

By using a purpose built sealer, as opposed to such methods as a water bowl, paint brush and opening the flaps on envelopes to receive the water, the T300 Sealer removes the risks associated with dirty, static water that can often be left on the end of the brush or in the bowl.

This machine is ideal for businesses with varied Envelopes. With the AFM300S, you'll have the speed you need to seal your mail quickly and efficiently.

SPECIFICATIONS

Model	AFM300ST300
Size	L35in x D15in x H20in
Weight	56 Lbs
Speed	Adjustable up to 300/min
Material size	Min 6 x 4 in (deep) Max 12 x 10 in (deep)
Thickness	Up to approx. 0.32 in
Power	120v 50/60hz or 220/240

The Benefits of Envelope Sealers

Why purchase your envelope sealer from All For Mailers Inc?

- Ideal for long runs and designed for trouble free handling of the largest mailings.
- Also ideal for shorter runs which are "time critical", where the un-sealed mail does not hit the mailroom until 20 minutes before collection.
- Ideal backup to heavy duty inserters, where smaller runs can be sealed without the need to adjust the inserter. It can generally handle items of sizes/thicknesses unsuitable for the heavy duty inserter after hand inserting.
